

MULTICLOUD MAGIC

MASTERING THE ART OF BUSINESS AGILITY

Businesses are no stranger to the cloud. As data demands continue to evolve, many organizations are asking themselves — is it time to add another?

In a cloud-first world, is two (or more) better than one?
If done right, the answer is likely yes.

Still — what really is multicloud?

Multicloud means using several cloud computing and storage options from assorted providers in a single network architecture. It could be multiple public clouds or multiple private clouds or a mix of both.

WHY ARE BUSINESSES CHOOSING MULTICLOUD?

Cost Optimization

Surveys reveal that optimizing cloud spend is a top initiative for 2021.

Reliability

Multiple providers typically mean there is a built-in backup where you need it.

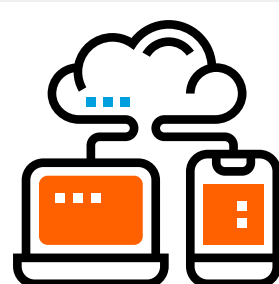

Agility

Multicloud strategies will reduce vendor dependency for 2/3 of organizations by 2024.

Flexibility

Each Cloud has advantages — multicloud helps you build what you need for your unique workloads.

HARNESS THE MAGIC

*with 1623 Farnam's elixir
for cloud excellence.*

Location in the heart of the U.S., which sets clouds up for success

Growing partnerships with Google Cloud Connect, Telia and more

Quick, private connections to the providers you and your data-intensive applications need

Need greater reliability, scalability, agility and more?

Try multicloud on for size.
